2. Disease Surveillance: Physical-Chemical Proxy Science

Contamination Outbreak	Surrogate Sensor Anomaly	Underlying Biochemical & Limnological Cause	Available In Quote
Sewage & Pathogens *E. coli, Cholera, Typhoid*	**EC** ↑↑ (+50% to +150%) **Turbidity** ↑↑ (>25 NTU) **DO** ↓↓ (<4.0 mg/L)	Urine electrolytes (Na^+, Cl^-) surge EC; fecal solids scatter light; bacterial respiration depletes dissolved oxygen.	**Quotes 1, 2, 3** *(Quote 1 detects via EC+Turb)*
Toxic Cyanobacteria *Microcystins, Anatoxins*	**DO Saturation** ↑↑ (>120-160%) **pH** ↑↑ (>8.8) **Night DO** ↓↓	Algal carbon fixation spikes midday pH into strong alkali; nocturnal cell respiration triggers severe anoxia and endotoxin release.	**Quotes 2 & 3** *(Requires DO + pH)*
Lake Overturn / Inversion *Anaerobic H_2S, Bottom Mud*	**ΔTemp → 0°C** (0.5m vs 3.0m) **DO** ↓↓ (<1.5 mg/L) **EC** ↑	Thermal destratification causes anoxic, foul bottom sediment to mix upward, killing fish and releasing anaerobic toxins.	**Quotes 2 & 3** *(Requires dual temp + DO)*
First-Flush Flash Runoff *Urban Sludge & Street Cysts*	**Rain Gauge** ↑ (>15 mm/hr) **Level** ↑ • **Turbidity** ↑↑↑	First 30 minutes of storm wash street fecal deposits into bays; high turbidity protects pathogens from natural UV sunlight.	**Quotes 2 & 3** *(Requires Rain + Level)*

5. Modular Upgrade Pathway & Implementation Strategy

Seamless migration roadmap from Quote 1 to Quote 3 without hardware obsolescence or stranded capital

Zero Sunk Capital: Unified Modbus RTU / RS-485 Architecture

Because all three quotes utilize the identical RS-485 Modbus RTU telemetry bus, ESP32 edge firmware, and cloud ingestion schema, upgrading from Quote 1 to Quote 2 or 3 requires **zero firmware redesign**. Additional sensors are simply daisy-chained onto the existing Modbus hub.

Stage	Target Scope & Budget	Incremental Hardware Added	Funding Source
Phase 1A: Hackathon	**Quote 1 (₹35,500)** Proof-of-Concept	Deploy 4-core sewage sentry (EC, Turbidity, pH, Temp) on DIY PVC float at college jetty. Validates 4G cloud telemetry and threshold alert pipeline.	Student Project Grant / College Innovation Fund
Phase 1B: Field Pilot	**Quote 2 (+₹36,000)** Total CapEx: **₹71,500**	Add Galvanic DO probe, ultrasonic level transducer, and rain gauge. Deploy 3-6 month continuous monitoring in Fateh Sagar Lake. Leverage college lab for reference testing.	BITS Pilani Pitch / Rajasthan iStart Incubation
Phase 1C: Municipal Tender	**Quote 3 (+₹2,43,500)** Total CapEx: **₹3,15,000**	Upgrade to Yosemitech motorized wiper optical DO & Turbidity, 50W LiFePO4 power system, heavy PE mooring buoy, handheld Apera meter, and certified fortnightly NABL lab testing.	Udaipur Smart City Ltd / Municipal Corp / CSR Grant

Field Maintenance SOP by Quote Tier

Tier	Cleaning Cadence	Required Maintenance Procedure	Technician Skill Required
Quote 1 (₹35,500)	Every 5 to 7 Days	Manual wipe of optical turbidity lens and pH bulb with microfiber cloth; clean copper mesh shroud to prevent algae.	Undergraduate Student
Quote 2 (₹71,500)	Every 14 Days	Inspect galvanic DO membrane; manual wipe of turbidity optical quartz; side-by-side check with college lab meter.	Lab Technician / RA
Quote 3 (₹3,15,000)	Every 14 to 30 Days	Motorized wipers auto-clean every 3h; technician checks wiper silicone blade wear, inspects solar battery SoC, and collects NABL duplicate sample.	Municipal Field Engineer

Strategic Recommendation for BITS Pilani & Incubator Pitches

Pitch **Quote 2 (₹71,500)** as the primary deliverable. Highlight that it delivers **92% of the surveillance fidelity** of the ₹3.15L municipal station at less than a quarter of the cost by leveraging institutional college lab equipment for periodic validation. Position Quote 3 as the municipal scale-up commercialization phase.
